

OECD Main Economic Indicators Database Manual

M a r c h 2 0 0 7

This version of documentation is preliminary and does not necessarily represent the current Global Insight databases. The availability of specific data may not be reflected in this version because of ongoing changes to the data. For example, series codes may have been added or dropped and descriptive information (leftmost column) may have changed. Please direct any questions concerning the accuracy or completeness of the information or the availability of data to Client Resource Center at 1 800 933 3374 or email to support@globalinsight.com.

INTRODUCTION

Global Insight maintains the complete set of data from the Organization for Economic Cooperation and Development (OECD) publication Main Economic Indicators. The OECD Main Economic Indicators Database provides a wide range of indicators on recent economic developments in the 30 OECD Member countries. Current series for 6 major non-member countries (Brazil, China, India, Indonesia, Russian Federation and South Africa) within the program of the OECD Centre for Co-Operation with Non-Members (CCNM) are also included. The OECD gathers data directly from national sources. The base year of the series, as well as the units of measurement, vary from country to country. In some instances, the OECD will rebase or readjust the series in order to allow for country comparisons.

Over 6,600 time series are available on an annual, quarterly and/or monthly basis with most beginning in 1960. The majority of data are expressed in the national currency of each country. Users are advised that not all concepts are available for all countries reported.

Data from the MEI database is copyrighted. OECD grants users the right to use its data for information, personal use and non-commercial purpose only. Un-authorized reproduction, lending, hiring, transmission, or distribution of all or part of the MEI database is prohibited. Applications for redistribution permission should be made to:

OECD Publications
2 rue Andre-Pascal
75775 PARIS Cedex 16 FRANCE

For further information, please visit OECD website: <http://www.oecd.org/publications>.

MNEMONICS DESIGN

An integral feature of database design is a consistently defined naming, or mnemonic scheme to identify series. As with each of the Global Insight (formerly WEFA) databases, specific conventions are employed in the OECD Main Economic Indicators database.

Series codes are constructed by Global Insight using a portion of the OECD codes and are broken down into four distinct parts:

Periodicity + Country Code + Variable Code + Measure Code

Periodicity: Frequency of the series - A is for annual, Q for quarterly, and M for monthly.

Country Code: Refer to the next section of the document for a complete list of the 3-digit country and area codes.

Variable Code: Provided directly from OECD. The first two characters of this code denote the Subject Heading. Listing of the Subject Headings can be found in the appropriate section of this document.

Measure Code: This part is generally left blank with some exceptions due to the 15-character limitation in the mnemonics. Please refer to the proper section for a list of these exceptions. In addition, suffix A is appended only when the series is seasonally adjusted. There are instances where seasonally adjusted data is not available from the national sources; it is adjusted by the OECD Secretariat.

Example (OECD code) USA.PRCNDW01.NCML

<u>Position</u>	<u>Description</u>
A111PRCNDW01MN	Periodicity Code and Country Code: A denotes annual series, Q denotes quarterly series, M denotes monthly series. 111 is the three-digit code for the United States. A list of all country and aggregate codes appear in the next section.
A111PRCNDW01MN	Subject Code: This code is provided directly from the OECD. The first two characters of this code denote the Subject heading. A list of subject headings appears in the section.
A111PRPEIN01MN	Measure Code: To remain within the limits of GII series coding, each OECD measure code has been assigned unique characters by Global Insight to indicate the basis on which data is reported. It should be noted that an ending suffix of A indicates that the data are seasonally adjusted by national source. A list of measure codes used in the databank are shown at the end of this section.

COUNTRY AND AREA CODES

Country Codes:

<u>Country</u>	<u>OECD</u>	<u>GLOBAL INSIGHT</u>
Australia	AUS	193
Austria	AUT	122
Belgium	BEL	124
Belgo Luxembourg	BLX	126
Brazil	BRA	223
Canada	CAN	156
China	CHN	924

Unit Labor Cost	ULQ
Standardized Business Confidence Indicators	BSC
Standardized Consumer Confidence Indicators	CSC

MEASURE CODES

Unique measure codes have been assigned by Global Insight in place of the OECD coding due to the 15-character limitation of the mnemonics. In addition to using these codes to construct mnemonics, where applicable, and in the event the data is seasonally adjusted, the letter A should be appended at the very end. For example, M156PRINTO01XOA represents the monthly production index for Canada on a seasonally adjusted basis.

	<u>OECD</u>	<u>GLOBAL INSIGHT</u>
Sum of component periods	CU	CS
Monthly level	ML	ML
Quarterly level	QL	QL
Stock or quantum	ST	ST
Sum of component periods in US\$	CXCU	CU
Annual levels in US\$	CXAL	Au
Monthly levels in US\$	CXML	MU
Quarterly levels in US\$	CXQL	QU
Normal = 100	IXN	XN
Index, national base year	IXNB	XB
Index, publication base year (2000)	IXOB	XO
Index, same period previous year	IXPY	XP
National currency, monthly level	NCML	MN
National currency, annual level	NCAL	AN
National currency, sum of component periods	NCCU	CN
National currency, quarterly level	NCQL	QN
Index made on national currency series	NCIXOB	XC
Current prices at quarterly rates	CQR	QR
Current prices at annual rates	CAR	AR
Constant prices, national base year at quarterly rates	VNBQR	QV
Constant prices, national base year at annual rates	VNBAR	AV
Chained constant prices, national base year at quarterly rates	LNBQR	QC
Chained constant prices, national base year at annual rates	LNBAR	AC
Implicit price deflator, national base year = 100	DNB	DN
Volume index expressed 2000=100	VIXOB	VO
Unit labor cost index, publication based trend (2000)	IXOBTE	XT
Unit labor cost index, growth rate, previous period trend	GPTE	GT
Unit labor cost index, growth rate, previous period	GPS	GP

IMPORTANT NOTE TO USERS

The following document represents the MEI Data Inventory that provides a comprehensive list of the series in the data bank as published in the August 2006 issue of Main Economic Indicators. Recent additions, changes and revisions to series codes are also not reflected in the document.

The file will be updated when the OECD releases a revised MEI Data Inventory.

August

2006

août

The series listed in this inventory are consistent with those published in the August 2006 issue of *Main Economic Indicators*. All changes to this inventory are recorded in *MEI Database notes* which are issued each month. This Inventory as well as the *MEI Database notes* may be found at the following Internet address:

<http://www.oecd.org/std/mei>

Les séries publiées dans cet inventaire correspondent à celles publiées dans le numéro d'août 2006 des *Principaux indicateurs économiques*. Tous les changements dans cet inventaire sont enregistrés dans les *MEI Database notes*, publiées mensuellement. Cet inventaire ainsi que les *MEI Database notes* se trouvent à l'adresse Internet suivante :

MAIN ECONOMIC INDICATORS INVENTORY

A series code is composed of 3 elements separated by a dot, representing the geographic area, subject and measure of the time series. Below is a guide to the codes used.

Geographic Codes <i>Characters 1 to 3 refer to the ISO country code or area total abbreviation.</i>							
Australia	AUS	Iceland	ISL	Slovak Republic	SVK	South Africa	ZAF
Austria	AUT	Ireland	IRL	Spain	ESP	OECD-Total	OTO
Belgium	BEL	Italy	ITA	Sweden	SWE	OECD-Total excl. high inflation	OTL
Canada	CAN	Japan	JPN	Switzerland	CHE	OECD-Europe	OEU
Czech Republic	CZE	Korea	KOR	Turkey	TUR	OECD-Europe excl. high inflation	OEL
Denmark	DNK	Luxembourg	LUX	United Kingdom	GBR	Major seven	G7M
Finland	FIN	Mexico	MEX	United States	USA	Euro area (European methodology)	EMU
France	FRA	Netherlands	NLD	Brazil	BRA	Euro area (OECD methodology)	EUZ
Germany	DEU	New Zealand	NZL	China	CHN	EU 15	E15
Western Germany	DEW	Norway	NOR	India	IND	World	WLD
Greece	GRC	Poland	POL	Indonesia	IDN	Non-OECD	NOC
Hungary	HUN	Portugal	PRT	Russian Federation	RUS	SDR	SDR
Subject codes <i>The two or three first characters of the subject code correspond to the first level of the subject hierarchy. Below are the main headings referring to the first level of the subject hierarchy.</i>							
Leading Indicators	LO	Business tendency surveys (services)	BV	Domestic credit and debt	CR		
National Accounts	NA or SN	Consumer opinion surveys	CS	Interest Rates	IR		
Production	PR	Employment	EM	Security issues	SI		
Sales	SL	Hours	HO	Share prices	SP		
Orders	OD	Unemployment	UN	Currency Conversions	CC		
Work started	WS	Population and Labour Force	PL	External Finance	XF		
Work in progress	WI	Labour compensation	LC	Foreign Trade	XT		
Stocks	ST	Producer Prices	PP	Balance of Payments	BP		
Business tendency surveys (construction)	BC	Wholesale prices	WP				
Business tendency surveys (non-manufacturing)	BN	Consumer Price Index	CP				
Business tendency surveys (retail trade)	BR	Other prices	OP				
Business tendency surveys (manufacturing)	BS	Monetary aggregates	MA				
Quarterly National Accounts:		GDP by type of expenditure	EXP	Comparative volume indices	CMP		
Measure codes <i>The last element represents the measure of the data. A measure describes the way data are presented. SA at the end of the measure code signifies that the data are seasonally adjusted.</i>							
Sum of component periods (e.g. quarter=sum of 3 months)	CU	Index, national base year				IXNB	
Monthly level	ML	Index, publication base year (2000)				IXOB	
Quarterly level	QL	Index, same period previous year				IXPY	
Stock or quantum	ST	National currency, monthly level				NCML	
Sum of component periods in USD	CXCU	National currency, quarterly level				NCQL	
Monthly levels in USD	CXML	National currency, sum of component periods				NCCU	
Quarterly levels in USD	CXQL	Index made on national currency series				NCIXOB	
Normal = 100	IXN						
Current prices	C	Volume index, national base year = 100				VIXNB	
Constant prices, national base year	VNB	Volume index expressed with 2000 = 100				VIXOB	
Chained constant prices, national base year	LNB	Current prices converted with current PPPs				CPC	
Constant prices, official OECD base year (2000)	VOB	Current prices converted with 2000 PPPs				VPC	
Implicit price deflator, national base year = 100	DNB	Constant 2000 prices converted with 2000 PPPs				VPVOB	
Implicit price deflator expressed with 2000 = 100	DOB						
<i>Those measures are followed by AR (resp. QR) for quarterly data expressed at annual (resp. quarterly) level.</i>							

Additional metadata:

Unit: The unit shown in the Inventory corresponds to that shown in the printed publication. When data are exported from SQL or Beyond 20/20, the data should be multiplied by the corresponding power of ten (see below). As a result, indices are expressed in base = 1.00 (and not base = 100) and exchange rates are expressed in Dollars per unit of national currency (and not Cents per unit of national currency) to facilitate the use of the data in further calculations.

Power of ten: the number 3 signifies that the data are expressed in thousands, 6 means that the data are in millions, 9 in billions etc. The number is the power of ten needed to multiply the figures to obtain the data in units. Indices are displayed in the form 100.88 etc. The power of ten associated with all indices is -2 which means that when the data are uploaded into your database they will be stored in the form 1.0088 if the power of ten is applied.

INVENTAIRE DES PRINCIPAUX INDICATEURS ECONOMIQUES

Un code de série se compose de 3 éléments séparés par un point, représentant la zone géographique, le sujet et la mesure de la série. Ci-dessous, un guide des codes utilisés.

Codes géographiques <i>Les caractères 1 à 3 se réfèrent au code ISO de pays ou à l'abréviation de la zone géographique.</i>							
Australie	AUS	Islande	ISL	République slovaque	SVK	Afrique du sud	ZAF
Autriche	AUT	Irlande	IRL	Espagne	ESP	OCDE-Total	OTO
Belgique	BEL	Italie	ITA	Suède	SWE	OCDE-Total excl. forte inflation	OTL
Canada	CAN	Japon	JPN	Suisse	CHE	OCDE-Europe	OEU
République tchèque	CZE	Corée	KOR	Turquie	TUR	OCDE-Europe excl. forte inflation	OEL
Danemark	DNK	Luxembourg	LUX	Royaume-Uni	GBR	Sept grands pays	G7M
Finlande	FIN	Mexique	MEX	États-Unis	USA	Zone euro (méthodologie européenne)	EMU
France	FRA	Pays-Bas	NLD	Brésil	BRA	Zone euro (méthodologie OCDE)	EUZ
Allemagne	DEU	Nouvelle-Zélande	NZL	Chine	CHN	EU 15	E15
Allemagne occidentale	DEW	Norvège	NOR	Inde	IND	Monde	WLD
Grèce	GRC	Pologne	POL	Indonésie	IDN	Non OCDE	NOC
Hongrie	HUN	Portugal	PRT	Fédération de Russie	RUS	DTS	SDR
Codes sujet <i>Les deux ou trois premiers caractères du code sujet correspondent au premier niveau de la hiérarchie du sujet. Ci-dessous, la liste des principales rubriques du premier niveau de classification.</i>							
Indicateurs avancés OCDE		LO	Enquêtes de conjoncture (services)	BV	Crédit et endettement intérieurs	CR	
Comptes nationaux		NA ou SN	Enquêtes d'opinions des consommateurs	CS	Taux d'intérêt	IR	
Production		PR	Emploi	EM	Crédits au secteur intérieur	SI	
Ventes		SL	Heures	HO	Cours des actions	SP	
Commandes		OD	Chômage	UN	Convertisseurs de devises	CC	
Mises en chantier		WS	Population et population active	PL	Finances extérieures	XF

Stocks		ST	Prix à la production	PP	Balance de Paiements	BP	
Enquêtes de conjoncture (construction)		BC	Prix de gros	WP			
Enquêtes de conjoncture (industries non manuf.)		BN	Indice des prix à la consommation	CP			
Enquêtes de conjoncture (commerce de détail)		BR	Autres prix	OP			
Enquêtes de conjoncture (industries manuf.)		BS	Agrégats monétaires et leurs composants	MA			
Comptes Nationaux Trimestriels :			PIB par dépense	EXP	Indices de volume comparatifs	CMP	
Codes de la mesure <i>Le dernier élément représente la mesure des données. La mesure décrit sous quelle forme sont présentées les données. SA à la fin de la série signale qu'elle est corrigée des variations saisonnières.</i>							
Somme des périodes composantes (ex. : trimestre=somme de 3 mois)		CU	Indice, année de base nationale			IXNB	
Niveau mensuel		ML	Indice, année de base publication (2000)			IXOB	
Niveau trimestriel		QL	Indice basé sur la même période de l'année précédente			IXPY	
Stock ou quantum		ST	Monnaie nationale, niveau mensuel			NCML	
Somme des périodes composantes en USD		CXCU	Monnaie nationale, niveau trimestriel			NCQL	
Niveaux mensuels en USD		CXML	Monnaie nationale, somme des périodes composantes			NCCU	
Niveaux trimestriels en USD		CXQL	Indice basé sur la série en monnaie nationale			NCIXOB	
Normal = 100		IXN					
Prix courants		C	Indice de volume, année de base nationale = 100			VIXNB	
Prix constants fixes, année de base nationale		VNB	Indice de volume exprimé avec 2000 = 100			VIXOB	
Prix constants en chaîne, année de base nationale		LNB	Prix courants convertis avec des PPA courantes			CPC	
Prix constants fixes, année de base officielle OCDE (2000)		VOB	Prix courants convertis avec des PPA de 2000			VPC	
Indice implicite de prix, année de base nationale = 100		DNB	Prix constants de 2000 convertis avec des PPA de 2000			VPVOB	
Indice de prix implicite exprimé avec 2000 = 100		DOB					
<i>Ces mesures sont suivies de AR (resp. QR) pour les données trimestrielles exprimées en niveaux annuels (resp. trimestriels).</i>							

Métadonnées supplémentaires :

Unité : L'unité publiée dans l'inventaire correspond à celle utilisée dans la publication imprimée. Quand des données sont exportées depuis SQL ou Beyond 20/20, elles doivent être multipliées par la puissance de dix correspondante (voir ci-dessous). En conséquence, les indices sont exprimés en base = 1,00 (et non base = 100) et des taux de change sont exprimés en dollars par unité de monnaie nationale (et non en cents par unité de monnaie nationale) pour faciliter l'utilisation des données dans d'autres calculs.

Puissance de dix : le numéro 3 signifie que les données sont exprimées en milliers, 6 signifie que les données sont exprimées en millions, 9 exprimées en milliards etc. Le nombre est la puissance de dix requise pour multiplier les chiffres afin d'obtenir des données en unités. Les indices sont affichés sous la forme 100.88 etc. La puissance de dix associée à tous les indices est -2, ce qui signifie que quand les données sont transférées dans une base de données elles sont enregistrées sous la forme 1.0088 si la puissance de dix est appliquée.
