Introduction

The WEFA Direction of Trade Database presents detailed data of the exports and imports of more than 200 and countries and regions as compiled by the International Monetary Fund and published in the Direction of Trade Statistics Yearbook. In addition to the coverage extended to individual nations, the database includes geographical area sum totals and other categories of countries not elsewhere specified.

The country classifications employed in the database follow the format established by the IMF and consist of 3 categories: Industrial Countries, Developing Countries, and the group of countries consisting of the former U.S.S.R., Eastern Europe, etc. The Category Developing Counties is subdivided into 6 geographical areas: Central and South America, Caribbean and Other Americas, Middle East, Asia, Africa and Oceania. This arrangement facilitates the user's ability to recognize the importance of trade flows between nations and groups of nations on both a geographical and political basis.

An important historical perspective is provided in this database, for many of the series cover two decades or more of reporting, with many series dating back to 1948. Data are available on an annual or monthly basis. The unit of measurement is millions of U.S. dollars (for some series, the measurement is billions of U.S. dollars). Exports are reported on an f.o.b. basis and imports are reported on a c.i.f. basis, except for the following countries, which report their imports on an f.o.b. basis: Australia, Canada, Czech Republic, Dominican Republic, Latvia, Mexico, Papua New Guinea, Paraguay, Peru, Romania, Slovak Republic, Solomon Islands, South Africa, Venezuela and Zimbabwe.

Arrangement of the Manual

The WEFA Direction of Trade Database Manual is organized into two major sections. The first section provides information on the contents of the database, the frequency of the data, start dates of series, the source of the data and an explanation of mnemonics design. A careful reading of the first section will acquaint users with these data and facilitate a better understanding of them.

The second section forms the main body of the manual. It is divided into nine sections of countries organized on an economic, geographic or political basis. Each section will be prefaced with an alphabetized list of the countries to be found and their respective three digit country codes. This will aid users in finding the country or countries they desire more quickly. The first section contains the different geographical and categorical areas. The next section contains the group of countries known as Industrial Countries. The next seven sections are comprised of the group of countries known as Developing Countries, organized by geographical area: Europe, Central and South America, Caribbean and Other Americas, Middle East, Asia, Africa and Oceania. The last section contains the group of countries consisting of the U.S.S.R., Eastern Europe, etc. and other centrally planned economies.

The data tables on each page will be formatted as follows:

1 ▶ **Australia 193**

EXPORTS: 70
IMPORTS: 71

2 { NOTE: To form a complete seriescode, prefix the 3-digit country code shown above with either an **A** or **M** for annual or monthly, and append with **70** for exports or **71** for imports, and append with desired trading partner code listed below. The availability of a particular frequency for each time series is indicated by the start dates listed under the appropriate frequency heading.

Mnemonics Design

An essential feature of all WEFA databases is a consistently defined mnemonics, or naming scheme. The WEFA Direction of Trade Database employs specific conventions in its mnemonics design, and an understanding of these conventions will aid the user in accessing and interpreting the data. Series codes are composed of five sections:

Position	Definition	Number of Characters
1	Frequency of data	1
2-4	Country code	3
5-6	Export or Import code	2
7-9	Trading partner code	3
10	Unit of measurement	1

To form a complete seriescode, combine the characters for each code as shown in the following example:

A15670273G	Annual exports, Canada to Mexico, millions of U.S. dollars
A15670273G	Frequency, annual; to form code for monthly series, prefix seriescode with an **M**
A**156**70273G	Three digit country code for Canada
A156**70**273G	Export code; to form seriescode for imports, substitute 71 (71V for countries reporting imports on an f.o.b. basis) for 70
A15670**273**G	Trading partner code for Mexico
A15670273**G**	Unit of measurement, millions of U.S. dollars; some seriescodes use billions of U.S. dollars, use **I**
