## Introduction

Global Insight's State Database contains a varied collection of macroeconomic data for states and regions.

The State Macro Data Base (RMAC) contains macroeconomic data for fifty states and the District of Columbia as well as selected detail for Census regions and divisions, Bureau of Economic Analysis (BEA) regions, U.S. totals, Puerto Rico and the Virgin Islands. Series are updated on a weekly, monthly, quarterly or annual basis, depending upon the periodicity of the source data.

The Industry Classification for this data base is based on the North American Industry Classification System (NAICS). This classification has replaced the Standard Industry Classification (SIC).

Global Insight's Regional Data Bases offer distinct advantages to the user. Extensive efforts have been undertaken to provide the data in a consistent time series format. More so than data collected at the national level, regional data are often inconsistent historically. For example, the reporting basis for construction permits has changed several times in the past thirteen years without revision of the historical data. Global Insight provides these regional data adjusted historically to the most recent reporting basis.

## Arrangement of the Manual

The State Macro Database Manual consists of two sections. The first section contains descriptive information on the State Macro Database and mnemonics design. The second section forms the main body of the manual. In this section, the user will find relevant information on the data, formatted into tables as shown in the following example:

## Mnemonics Design

An integral feature of data base design is a consistently defined naming, or mnemonics scheme used to identify series. As with each Global Insight data base, specific conventions are employed in the mnemonics design. Seriescodes can be up to 11 characters in length and are comprised of two parts:

Prefix	Variable description code
Suffix	State, region or MSA code

To form a complete seriescode, combine the proper prefix and suffix for the desired data category and geographic area as shown in the following example:

**RLFCT** Total civilian labor force, NSA (RLFC), for the state of Texas (TX)

<u>Code</u>	<u>Definition</u>
-------------	-------------------

<b><u>RLFC</u></b>	Variable description code (prefix). RLFC - total civilian labor force. Prefix codes can be found in the data table for the appropriate category.
--------------------	---

<b><u>TX</u></b>	State, census division, region, . TX - Texas.
